No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11, 8

Patent No. 5916796
GENERAL INFORMATION:
APPLICANT: Joergensen, Per Linaa
APPLICANT: Sch lein, Martin
APPLICANT: Hansen, Christian
TITLE OF INVENTION: An Enzyme Exhibiting Cellulase Activity
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 59167960 No. 5916796disk of No. 5916796th America, Inc.

Acidothermus cellulolyticus

```
New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide molecule encoding thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucleotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus cellulolyticus avicelase AviIII CBD III #2.

The present sequence represents a fragment of ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicellulose in a starking material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of
                                                                                                                               Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated polynucleotide molecule encoding thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucelotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. To method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus cellulolyticus avicelase AviIII CBD III #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 VSGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD

GuxA is a thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, purp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                    polypoptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicallulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of ManA.
                                                                                                                                                                                                                                                                                                                                                                                                                     1 VSGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCD 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel thermal tolerant GuxA polypeptide derived from Acidothermus cellulolyticus, useful for reducing cellulose in a starting material, and for the conversion of biomass to biofuels and biofuel additives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a GuxA polypeptide. GuxA is thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA, or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides
                                                                                                                                              65

The invention relates to a thermal tolerant Guxl peptide from A. cellulolyticus. The Guxl exoglucanase is a member of the glycoside hydrolase family and comprises a catalytic domain GH48, carbohydrate binding domain type II. and a carbohydrate binding domain type II. and a carbohydrate binding domain type II. for section of cellulose into biofuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercial scale processing of cellulose to sugar for use in biofuel production. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New thermal tolerant Guxl peptide having specified amino acid sequence, useful in the degradation of cellulose to biofuels.
                                                                                                                                             Gux1; thermal tolerant; exoglucanase; glycoside hydrolase; cellulose; biofuel; detergent; pulp; paper processing; feed processing; textile;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a thermal tolerant Gux1 peptide from A. cellulolyticus. The Gux1 exoglucanse is a member of the glycoside hydrolase family and comprises a caralytic domain GH48. carbohydrate binding domain type III, and a carbohydrate binding domain type III. The polypeptide is useful in the degradation of cellulose into biofuel, or pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercial-scale processing of cellulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Gux1 cellulase CBD_III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuels additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AviIII peptide is useful in the antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide
                                                                                                                                                                                Avicelase, AviIII; glycoside hydrolase; enzyme; cellulase; biofuel;
detergent; pulp processing; paper processing; feed processing; textile;
cellulose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Avicelase; AviIII; glycoside hydrolase; enzyme; cellulase; biofuel; detergent; pulp processing; paper processing; feed processing; textile; cellulose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polynucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amino acid sequence of AviIII carbohydrate binding domain type III.
                                                                                                                                                Amino acid sequence of AviIII carbohydrate binding domain type II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      present sequence is derived from a thermostable avicelase,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 88;

AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed processing and in textile processes. The thermostable AviIII peptide is useful in the degradation of cellulose, and in generating specific anti-AviIII antibodies that are useful in purifying recombinant AviIII polypeptides from generically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing AviIII polypeptide actions of the polypeptide. The AviIII polymuclectide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                             useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Avicelase, AviIII; glycoside hydrolase, enzyme; cellulase; biofuel; detergent; pulp processing; paper processing; feed processing; textile;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a thermostable avicelase polypeptide, designated AviIII. AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed production of detergents, pulp and parer processing, food and feed useful in the degradation of cellulose, and in generating specific anti-aviIII antibodies that are useful in purifying recombinant AviIII polypeptides from genetically engineered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polymucleotide is useful as a source of probes or primers in various diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New thermostable AviIII peptide from Acidothermus cellulolyticus, useful for degradation of cellulose or in generating anti-AviIII antibodies for purifying recombinant AviIII polypeptides from genetically engineered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 957;

```
ö
The invention relates to an isolated polynucleotide molecule encoding a thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucelotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents the amino acid sequence of Acidothermus
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present sequence encodes ManA, a thermostable mannanase A polypeptide derived from Acidothermus cellulolyticus. ManA is a member of the glycoside hydrolase family of enzymes. ManA is useful for reducing hemicellulose in a starting material to simpler carbohydrate units, and ultimately to sugars which are useful in the food, feed, paper pulp, and biofuels industries. It is useful for the processing of food and in food stuffs as bulking agents, and for the degradation of mannase. ManA is also useful to raise polyclonal and monoclonal antibodies that are useful in purifying ManA, or detecting ManA polypeptide expression, and as well as reagent tools for characterizing the molecular actions of ManA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1363 GTGTCGGGTGGGGTGAAGGTGCAGTACAAGAACAATGATTCGGCGCGGGGGTGATAACCAG 1422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1423 ATCAAACCGGGFCTCCCAGFTGGFGAATACGGGGFTCGFTCGFCGGFGGAFTTGFCGACGGFG 1482
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel thermal tolerant mannanase A polypeptide derived from Acidothermus cellulolyticus, useful for reducing hemicellulose in a starting material, for processing of food, and as bulking agents in food stuffs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 ValSerGlyGlyValLysValGlnTyrLysAsnAsnAspSerAlaProGlyAspAsnGln

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a GuxA polypeptide. GuxA is thermostable cellulase, and is a member of the glycoside hydrolase family of enzymes. GuxA is useful for reducing cellulose in a starting material such as agricultural biomass to sugars. This is useful in biofuel production. GuxA is also useful in the conversion of biomass to biofuels and biofuel additives, in detergents, pulp and paper processing, food and feed processing, and in textile process. GuxA is also useful for raising polyclonal and monoclonal antibodies that are useful in purifying GuxA or detecting GuxA polypeptide expression, as well as reagent tools for characterizing the molecular actions of GuxA polypeptides

binding domain type III, and a carbohydrate binding domain type II. The polypeptide is useful in the degradation of callulose into biofuel, or for conversion of biomass to biofuel additives. It is used in detergents, pulp and paper processing, food and feed processing, and in textile processing. It can also be used alone or in combination with other cellulase or glycoside hydrolases. The novel polypeptide generates alternative cellulase enzymes capable of assisting in the commercial scale processing of cellulose to sugar for use in biofuel production. The present sequence represents a A. cellulolyticus Guxl cellulase encoding

                                                                                                                                                                                                                                                                                 The present sequence encodes a thermostable avicelase polypeptide, designated AviIII is a member of the glycoside hydrolase family of enzymes, and is a cellulase. AviIII is useful in the conversion of biomass to biofuels and biofuel additives. It may be useful in the production of detergents, pulp and parer processing, food and feed production of detergents, pulp and parer processing, food and feed useful in the degradation of cellulose, and in generating specific antipolypeptides from genetically enginered host cells, in detecting AviIII polypeptide expression, as well as a reagent tool for characterizing the molecular actions of the polypeptide. The AviIII polynucleotide is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AviIII; cellulose reduction; agricultural biomass; municipal solid waste; glycoside hydrolase; avicelase; ds; gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Acidothermus
```

```
The invention relates to an isolated polynucleotide molecule encoding a thermostable AviIII polypeptide. The polynucleotide is useful for detection of a polynucleotide encoding AviIII. The polynucelotide is useful for reducing cellulose in a starting material which involves administering to the starting material, e.g. agricultural biomass or municipal solid waste, a polypeptide molecule of the polynucleotide. The method further comprises administering a second polypeptide molecule chosen from the glycoside hydrolase family of proteins. The present sequence represents DNA encoding the Acidothermus cellulolyticus
                                                                                                                                                                                                New isolated thermal tolerant avicelase polynucleotide useful for detection of a polynucleotide encoding AviIII and for reducing cellulose in a starting material, e.g. municipal solid waste.
